

# WE ARE HIRING *Engineers*

## About *SRMC*

At Savannah River Mission Completion (SRMC), we safely treat radioactive liquid waste that was generated at the Savannah River Site as by-products from the processing of nuclear materials for national defense, research, and medical programs. The waste, totaling about 35 million gallons, is stored in 43 underground carbon-steel waste tanks.

Our innovative liquid waste program includes complex engineering, procurement, construction, and waste treatment and disposal in order to operationally close these waste tanks. At SRMC, we are protecting the environment for future generations.
